

### Submittal Data Sheet

#### Features

The Powerex patented E Z Backfeed® Retro, E Z Find™ and E Z Feed™ products allow most existing medical gas valves to be converted to incorporate a DISS gas specific backfeeding port and a DISS gas specific transducer connection. The benefits provided are: the facility has available on line port(s) for backfeeding specific areas of the facility for emergency preparedness and for remodeling. Also, the transducers, which provide/monitor gas line pressures in the zone, are able to be installed in the corresponding zone valve box for easy access for testing and service.

Where would you prefer to have your alarm transducers installed?

Here?

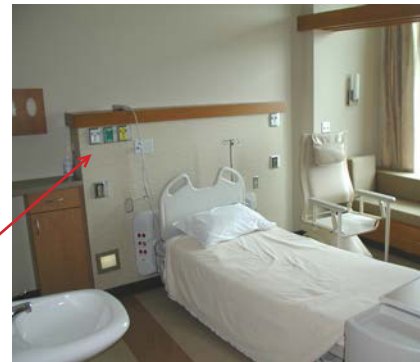

Or here?

Where would you prefer to backfeed your medical gases?

Here?

Or here?

EZ Backfeed retrofit kits are available in two types: single port kits can be used as EZ Backfeed or as EZ Find by temporarily removing the transducer during backfeed operations, dual port kits provide two DISS gas specific ports allowing backfeeding without removing the transducer.

There is a need for an acceptable place to backfeed medical gases that is safe, easy to find, easy to access. There is a need for an acceptable place to install transducers that is safe to access, easy to find and easy to access. That is what the EZ Backfeed®, EZ Feed™, and EZ Find™ products are all about – making your hospital safer and your job and the verifier’s job easier.
